Abstract

This report specifies the various processes and techniques used in gathering requirements, designing, implementing and testing for the project on **college management system**.

The problems regarding the current system in the college were analyzed and noted. This project aims to solve some of those problems and thus, adds more value to the current system.

The requirements were gathered from all the stakeholders and based on that we created a requirements model and designed the software based on it. The project is implemented in the form of a website.

Using the various resources and tools we gathered along the way, we implemented the college ERP system using some features that solve the current problems in the system such as a provision to edit the attendance and marks before locking it at the end.

The software was also tested using the various testing methods and results were positive.

Thus, the results can be integrated in the current ER system to improve it's working and solve some of the existing problems.

Introduction

The objective of College Information Management System is to allow the administrator of any organization the ability to edit and find out the personal details of a student and allows the student to keep up to date his profile. It'll also facilitate keeping all the records of students, such as their id, name, mailing address, phone number, DOB etc. So, all the information about a student will be available in a few seconds. Overall, it'll make Student Information an easier job for the administrator and the student of any organization.

The main purpose of this project is to illustrate the requirements of the project College Information Management System and is intended to help any organization to maintain and manage personal data. It is a comprehensive project developed from the ground up to fulfill the needs of colleges as they guide their students. This integrated information management system connects daily operations in the college environment ranging from Attendance management to communicational means among students and teachers. This reduces data error and ensures that information is always up-to-date throughout the college. It provides a single source of data repository for streamlining your processes and for all reporting purposes. It has a simple user interface and is intuitive. It ensures that the users spend less time in learning the system and hence, increase their productivity. Efficient security features provide data privacy and hence, increase their productivity.

2.1 Introduction to problem domain

As we know that, a college consists of different departments, such as course departments, fees management, library, event management etc. Nowadays applications and uses of information technologies is increased as compared to before, each of these individual departments has its own computer system to do their own functionalities. By having one main system they can interact with each other from their respected system by having valid user id and password.

2.2 Aim of the problem

The objective of College Information Management System is to allow the administrator of any organization the ability to edit and find out the personal details of a student and allows the student to keep up to date his profile. It'll also facilitate keeping all the records of students, such as their id, name, mailing address, phone number, DOB etc. So, all the information about a student will be available in a few seconds. Overall, it'll make Student Information an easier job for the administrator and the student of any organization. The main purpose of this project is to illustrate the requirements of the project College Information Management System and is intended to help any organization to maintain and manage personal data. It is a comprehensive project developed from the ground up to fulfill the needs of colleges as they guide their students. This integrated information management system connects daily operations in the college environment ranging from Attendance management to communicational means among students and teachers. This reduces data error and ensures that information is always up-to-date throughout the college. It provides a single source of data repository for streamlining your processes and for all reporting purposes. It has a simple user interface and is intuitive.

Background, Motivation and Scope

3.1 Inception

Inception is a process of establishing a basic understanding of the problem and the nature of the solution. This includes the need for this software, identification of stakeholders and defining multiple viewpoints.

What is the purpose of this project?

There is currently an ERP system in our college. But, not everyone is happy with the system.

While it is a step towards automating the college activities, it comes with its own set of problems. This project is designed to implement a college ERP system to eradicate some of these problems and add some features of our own that would add value to system.

Why do we need ERP?

Nowadays, in schools and colleges, it is very difficult to manage each and everything manually. Supervising and maintaining the whole database of a school or college can be time-consuming and challenging especially if it's done on a regular basis. So, we need to handle and manage everything smartly.

To solve this problem ERP(Enterprise Resource Planning) is used. ERP software makes it easy to track the progress of every department of school and automate different functions. With ERP everything can be seen on a single dashboard. The administrator can manage the college from anywhere. The possibilities of maintaining the whole database of a college with ERP software are endless.

Some of the prominent roles of ERP are:

- Manages the office and automates different functions.
- Helps in long-term management and planning of all departments of college.

- Eliminates the need for having multiple management software for each department.
- Daily activities like attendance can be digitalized and automated.
- Leave module for teachers can be automated.

3.2 Project Scope

The project is designed to help the teachers and students manage their college activities. It consists of relational databases of students, departments, faculty, courses of the entire university. Using these databases, various functions that include Attendance management, marks management and leave management are provided. Within attendance management, a teacher can enter the attendance status of each student for each course with their respective dates. Similar to attendance, Internal and Semester end marks can also be entered for each student.

Methodology

4.1 Identification of stakeholders

Enterprise Resource planning implementation is a difficult and complex decision where it involves people issues more than technological issues. Identification of stakeholders is a key step during the process of ERP implementation, because if done improperly, it will lead to failure of the implementation project.

The stakeholders are listed below:

Teachers

Teachers are the key stakeholders of the college ERP. Because they are the one who manage, edit, update the contents of the database of students such as attendance, internal marks, CGPA etc... It also helps them to assign their class to other teachers when they are on leave. This makes it easier to identify who among them are free to take the class at that time. So this software help them reduce their overhead and make their tasks easier and simple.

Students

Students are end users of ERP software. The attendance, internal marks uploaded by the teachers are viewed by students. It helps them track their attendance status. It also helps them to communicate with teachers and their classmates. So, students make up another set of stakeholders of this software.

Administrator

College administrator is responsible for maintaining the database of the college. They will have the privilege to modify the database i.e., to add/remove students/teachers/staff, update information regarding each of these. It is their responsibility to maintain the database of students

who pass out from the college and who freshly get admission to the college. So the Administrator play a major role in the ERP.

4.2 Viewpoints

Teachers viewpoint

For a teacher, this software must be easy to use. It should be easy to find different modules like attendance, leave module, internals marks, result etc. Teachers are the one who update the contents of the database, so it should be update save modify It.

Students viewpoint

A student can only view the information about himself, other than that everything will be hidden from them. They will not have the option to edit anything. So the graphical user interface must be good. They expect it to be functional.

Administrator's viewpoint

Administrator will have the privilege to view all the information about the college. They will have the option to track goals like, Average marks of all the students in a subject, Average attendance of all the students of a class etc.

4.3 Elicitation

When we started the project, we decided to collect the information from a couple of stakeholders like teachers, administrators, students and parents. They stated their role in the ERP system, their problems, likes and dislikes, problems they are facing with the software and how it is implemented.

Teachers

We had an opportunity to meet our college Computer Science Department Prof. Dr.Trisila Devi Nagavi and Prof. Divakar N. They gave us an idea about how our college ERP was working and explained about their role in the ERP. We asked the following questions

Can you explain the attendance entry process in detail?

Generally, just like the students, even teachers have their own user ID and password for the login purpose. There will be a column reserved for attendance purpose in a hierarchical manner. First there will be two columns class and subjects. Under the class column there will be a list of all the classes allotted to the faculty. On the other column there is subjects which is further divided into theoretical subjects which are of 4 credits.

Since there are autonomous batch students who are yet to complete their degree there are separate columns reserved for them since their pattern is different from the university syllabus. They will be having theoretical subjects of 4 credits each and they will also be having separate lab sessions of 1 credit each. Since the credits of autonomous subjects vary from those of the subjects of the university subjects there must be changes in terms of attendance and the credits allocated for each subject.

Can you explain how application for leave is managed in the ERP system?

Then there will be a column for the type of class. In this there will be further two types. Regular classes and alternate classes. Regular classes are those which the faculty handles for the allocated class as specified in the time-table. Alternate classes are those which the faculty handles in the absence of another faculty. When the faculty is on leave, it must be informed in the ERP such that the message goes to the professors and at the same time another teacher who is free. If the

faculty wants to take extra classes due to the incompleteness of the courses, then they should inform the students in the forum about the extra class and they can handle it

Generally, for the teachers there are basically 4 types of leave.

1. Earned leave
2. Restricted leave.
3. Casual leave.
4. Sick leave.

What are the problems that you face with the current ERP system?

The problem with the ERP software is if the faculty applies for leave and wants to allocate the class to any other faculty, then the request goes to all the faculties of all the departments. This should not happen because other department faculty cannot handle the class for any other department i.e. if the faculty of Computer Science department applies for the leave and if the request is sent, it must be sent to the faculties of the Computer Science department only and not for any other department like Civil ,Mechanical, E&E, and so on.

When the faculty is inserting the attendance into the system, there must be a separate space for the faculty to fill what topics they have covered in the class. It will be time consuming for the faculty to enter the topic every time. So, for this purpose the software must be designed in such a way that it inserts the topic automatically. Firstly, all the topics and the duration for the faculty in which the faculty must cover must be mentioned. And then the faculty must investigate it and cover the syllabus

according to the plan. This can also keep a track of the lecturer what they are teaching. If the doubts are raised by the students, then that would lead to shortage of time to cover the syllabus.

So, for this purpose the faculty can have the freedom to extend the duration to cover those topics by handling extra classes when the students are free. For taking the extra class, the faculty must block in the time table and it must be visible to all the faculties of that class so that there would be no collision in handling the extra class. Once if the faculty enters the attendance and if they press lock option, then there won't be any option to change the attendance of the students. Lastly, the teachers would like it if they could enter the attendance in the class itself. This would minimize the paper work and they could update the details at any place and at any time.

What do you expect from the module the lets you enter the marks of the students?

There will be another section to enter the CIE of all the students. The internals will be for 30 marks and when the faculty enters it into the ERP, it must automatically convert it into 10 marks. Generally, there will be 5 events. There will be 2 internals, followed by two events such as quiz, project. If the student scores below 40% of the allocated marks in the subject, then there must be a warning message sent to the student to score more marks in the upcoming internals.

At the end of all the events if the student could not mark the 50 mark, then there will be a make-up test conducted by the faculty so that the student would be having another chance to come up to the mark of 50%. This make-up test marks must be altered with the minimum marks of the CIE scored. And the final CIE marks should be displayed and be stated that the student is eligible or not eligible to take up the Semester End Examination. If the student is not able to take up the CIE due to personal reasons or if he is representing the college in any form of the activity, then it must be brought into the notice of the lecturer and the leave can be availed. If the student is ill, then the medical certificate must be attested, and a letter must be sent to the HOD to take up re-test. After the faculty enters the CIE there must be an option to save the CIE marks. When the

CIE marks are saved then the students will not be able to see the marks in their marks. They can view their CIE only when the marks are locked by the faculty. If the faculty locks the CIE, then there would not be any chance to change the CIE. The CIE must be locked after confirming the marks with the students only.

Student

We met several of our classmates and asked them some questions on behalf of the students in the college.

As a student, what are some problems you are facing with the current ERP system?

The ERP status was not updated regularly, and they could not track their attendance status as the app would crash. The GUI that is used in the interface is not up to the mark. It is difficult to keep the track of the attendance and the CIE. It would be easy if the attendance would be shown in a calendar like format so that it would be convenient and can also keep a track of the status of the attendance. There should also be forums where the teacher and the students are active. This will help the students in many ways such as studies, assignments, projects and so on. There should be interaction with the student-student and student-teacher so that the students can clear their doubts with any teacher as well as any student at any point of time. The forum will also help the students in conveying the information to all the students at a faster rate.

For the students who were in supplementary batch, they could not attend the first few weeks of class as they had exams. But, in the ERP they were marked as absent which made their attendance drastically low.

When the students are into college activities such as LCC sessions, IEEE sessions, representing

our college in sports or any other activities then students are marked absent. There must be another way to handle these problems so that there will be justice for the students for their hard work.

Administrator

We met the college administrator and asked the following question

What are your requirements from the ERP system as an admin?

As an administrator, they deal with large amount of data and functions. The system must be modular with a simple interface. The admin performs many functions on the database. These include searching for a record, add, update and delete a record. Thus, their interface needs to be quick and searching for records in the huge database must be optimized.

4.4 Elaboration

For the College ERP project, there are many classes of end users. These include the college staff, students and admin. As mentioned in the elicitation section, we talked with several stakeholders of different classes and collected their requirements. The requirements of the different classes were diverse. Some of them were in unison and some were in conflict. Thus, elaboration and later negotiation is required.

College staff

College staff are key stakeholders and use the ERP system the most. Thus, it is essential to cater to their needs first. Among the staff there are several different roles. For each role, The ERP system will have a different view based on the requirements of that group. Among the staff the requirements of the various groups are described below.

Teaching staff

Teaching staff make up most of the staff. A teacher expects the ERP system to be easy to use, reliable and reduce the work load. Each teacher belongs to department and are assigned to a class of students with a course. So, the teacher should only be able to view and manipulate the data of the students that they are assigned to.

The teachers' involvement In the ERP System, is to enter the attendance, the internal marks, the semester end examination marks. They will also have other features which include availing leave and managing a lecture plan for each course.

For Attendance management, the teachers expect a compact and functional interface. An interface where teachers use minimal effort to manage the attendance status of the students. The features expected for the attendance are to ability to enter the attendance to the entire class at once, edit the attendance of each individual student. Also, in the event of leave, they should be given an option of assigning the class to another teacher, who takes a course for the same class. In the event of entering internal marks and semester end examination marks, the teacher enters the marks for each individual student. This is initial a draft and can be edited. The students review the marks and verify. If there are any mistakes, the student notifies the teacher and the mistakes are corrected. After certain amount of time, when all the marks are confirmed, the marks are 'locked'. i.e., After locking, the marks cannot to changed.

When a teacher applies for a leave, there are many options for different categories of leave. The first category is casual leave, this is for general purposes. Restricted leave can be availed only on specific days given by the college. Then, Sick leave is for when the teacher is ill. Lastly, earned leave is an option given to each teacher for a period of 15 days.

Head of Department (HOD)

The head of department is a part of the teaching staff but has special privileges. They manage the operations of each department. The HOD could still conduct courses for students. So, they will have all the features given to a teacher. Also, as the HOD, they will have access to the records of every teacher, courses, students who belong to the same department.

Technical staff

The technical staff provide technical support to the teaching staff. This includes technical support in laboratories such as maintaining the functioning of computers in labs, maintaining the equipment in their respective departments. Unlike the teaching staff, they do not conduct classes. Their role in the ERP system is to provide support to other staff through communication. Also, they have the feature to avail for leave just like the teachers.

Students

Students are another class of end user. In the ERP system, students can view information regarding their attendance status, internal marks, Semester end examination marks, notifications from the college administration etc. A student expects the ERP system to be aesthetic and functional. A student should only be able to view information about himself.

Students generally want a nice graphical interface that provides a lot of information. In the case of attendance, they would like to see additional information other than just the number of classes attended. They would like to see day-wise attendance so that they can keep better record of their daily classes. Students also requested for a detailed view of attendance of each subject in a calendar form. Lastly, another feature that students would like to see is the addition of communication and feedback capabilities in the ERP. Students find it tough to communicate with other students with common interests as there is no common communication medium in the

college. A forum type infrastructure is required in the system.

Administrator

An admin holds all the privileges of the ERP system. The admin has access to all the databases in the system. These include student database, teacher database, courses database and several others. Their job is to maintain the systems and addressing the problems faced by the other users. The admin needs adequate resources and the right tools. The admin expects a simple interface where they can easily access the required information.

4.5 Negotiation

College ERP system is vast with a lot of desired features and functionality. Each stakeholder gives their list of requirements. As a project with four group members, we do not have the resources and tools to implement all the requirements. Thus, it is essential to find a balance among the various stakeholders where they can be satisfied with the outcome of the project. This is achieved through negotiation among the various classes of stakeholders.

It is in our interest to develop a Webapp that is functional, reliable, consistent and easy to use.

We collected the requirements from the different stakeholders that include, the teaching staff, technical staff, students and the administration. We reviewed the list of requirements and made a list of feasible and non-feasible requirements. We meet the stakeholders again and explain why some requirements were not feasible. For example, the leave module for the teachers can not to implemented as that feature has a lot functionality that is beyond the scope of this project.

We also found that some requirements from different stakeholders were conflicting. For example, the students had requested for a option to appeal wrong marking of attendance or marks by the teacher. But, the teachers were against this feature as that would increase the burden on the teachers and there was also a possibility of false usage of this feature by the students.

Considering both perspectives, we decided to agree with the teachers as this feature would displease teachers. The students were given the reason for not including their requirement and an agreement was reached.

The students wanted a social media type feature implemented on the ERP where the students from the college can communicate with each other and have a feed of the events in the college.

While the feature would have been nice to see, it was beyond the scope of this project. We stated that such an advanced version of the requirements was not possible. But, a implementation of the feature on a smaller scope with lesser functionality was possible. Therefore, we negotiated the features until both parties were satisfied.

Requirement

Purpose

The purpose of this project is to develop a College Management System that helps the teachers and students in easier management of College activities such as attendance, marks.

Intended Audience and Reading Suggestions

This project is intended for staff and students of JSS Science and Technology University. This document has been made under the guidance of college professors. This document has been organized into Overall description followed by the features and then the functional and non-functional requirements. The document may be read to desire of the reader.

Overall Description

Product Perspective

This project is modeled based on the current ERP system in the college. Students and teachers face several problems while using the system. Therefore, we wanted to build a system that has lesser number of features than the current system but, has more functionality.

Product Features

- Each teacher will be able to enter attendance and marks for their respective students.
- Each student will be able to view the attendance status for their respective courses.
- The teachers will be able to apply for various types of leave directly through the system.
- The students will be able to Communicate and provide feedback to their teachers.
- The students will have access to a forum page where they are communicate will each other.
- The administrator will be able to view and update information such as departments, classes, teachers, students, courses.

User Classes and Characteristics

There are several types of end users for the college ERP system. They are broadly divided as Students,

Staff and the Administrator. Each of these classes have their own set of features.

The student should have the following features:

- View the Attendance status of the courses to which they are enrolled.
- View the Marks of the courses to which they are enrolled.
- View the notification from the college administrator.
- Communicate or give feedback to their respective teachers.
- Communicate with other students of the same university.

The staff should have the following features:

- Access to the information of all students that attend their courses.
- Add and edit the Attendance status of those students.
- Add and edit the exam marks of those students.
- Avail the different types of leave.

- Swap classes with other teachers who teach for the same class.

The administrator should have the following features:

- Add and update students, teachers and courses.
- Assign teachers and students to courses

Operating Environment

The operating environment for College ERP system are listed below:

- Operating System: Windows 10
- Database: MySQL database
- Front end: HTML/CSS/Bootstrap
- Back end: Django

System features

Expected requirement: Student and staff information

Description and priority Information regarding students, teachers and courses are stored in the database. Every user can view only certain information based on their user class. For example, a teacher can view student and course information that they are handling. This feature is of high priority as the information must be viewed by only the authorized users.

Functional requirements

- Each user shall be able to view information in the database based on their user class.
- The administrator shall be able to view all the information in the database.

Normal requirement: Attendance and marks entry

Description and priority Attendance and marks entry is the main feature of the College ERP system. Hence, the priority is high. Teachers update the attendance and marks of the students who are part of her class. Students can view their respective Attendance and marks of the courses

they have taken.

Functional requirements

- Teachers shall be able to view, update and edit the attendance and marks of the students, part of their class.
- Teacher shall be able to take extra classes, switch classes with other teachers.

Exciting requirement: Communication among students and teachers

Description and priority Students and teacher will be able to communicate with each other directly

using the ERP system. Students may give their queries and feedback to a teacher and they may respond accordingly. The priority of this feature is low as cost of implementation could be very high. A simple version of this feature is to be implemented.

Functional requirements

- Students shall be able to communicate with their teachers by sends personal messages.
- Students shall be able to communicate with other students through a forum section.

2.5.4 External Interface Requirements

User Interfaces

The User interface is made using Bootstrap. Firstly, there will be a simple login page separate for students and teachers. Each student and teacher will have a unique interface. There will be a fixed sidebar with links to all the modules. The teachers will be able to view their respective students and update their attendance and marks using an effortless interface.

Hardware Interfaces

Since neither the mobile application nor the web portal have any designated hardware, it does not have any direct hardware interfaces. Any browser can be used to access the webapp.

Software Interfaces

The following is a list of software used in making of the project.

- Operating System: We have chosen Windows operating system for its best support and user-friendliness.
- Django: We have chosen to use Django for the back-end of the website as Django is a simple python framework and is suitable for beginners.
- Database: We are using SQLite database, which comes as default with Django.

Communications Interfaces

This project is to be deployed an online website. All the users can connect to the database server from anywhere and have access to their information.

Non-functional requirements

Safety requirements

If there is extensive damage to a wide portion of the database due to catastrophic failure, such as a disk crash, the recovery method restores a past copy of the database that was backed up to archival storage (typically tape) and reconstructs a more current state by reapplying or redoing the operations of committed transactions from the backed-up log, up to the time of failure.

Security requirements

The database contains sensitive information of all the students and staff. Therefore, optimal security measures must be taken to ensure data is safe from unauthorized users.

Software Quality Attributes

Availability: The users must always be able to view their information so that they can keep track

regularly.

Correctness: The information about attendance and marks must be correct to not feed wrong information to the users.

Requirements

Requirements management can be defined as a process of eliciting, documenting, organizing, and controlling changes to the requirements. Generally, the process of requirements management begins as soon as the requirements document is available, but 'planning' for managing the changing requirements should start during the requirements elicitation process.

The essential activities performed in requirements management are listed below.

1. Recognizing the need for change in the requirements
2. Establishing a relationship amongst stakeholders and involving them in the requirements engineering.
3. Identifying and tracking requirements attributes.

Requirements management enables the development team to identify, control, and track requirements and changes that occur as the software development process progresses. Other advantages associated with the requirements management are listed below.

- **Better control of complex projects:** This provides the development team with a clear understanding of what, when, and why the software is to be delivered. The resources are allocated according to user-driven priorities and relative implementation effort.
- **Improved software quality:** This ensures that the software performs according to the requirements to enhance software quality. This can be achieved when the developers and testers have a precise understanding of what to develop and test.
- **Reduced project costs and delays:** This minimizes errors early in the development cycle as it is expensive to 'fix' errors at the later stages of the development cycle. As a result, the project costs also reduce.

- **Improved team communication:** This facilitates early involvement of users to ensure that their needs are achieved.

5.1 Requirements change management

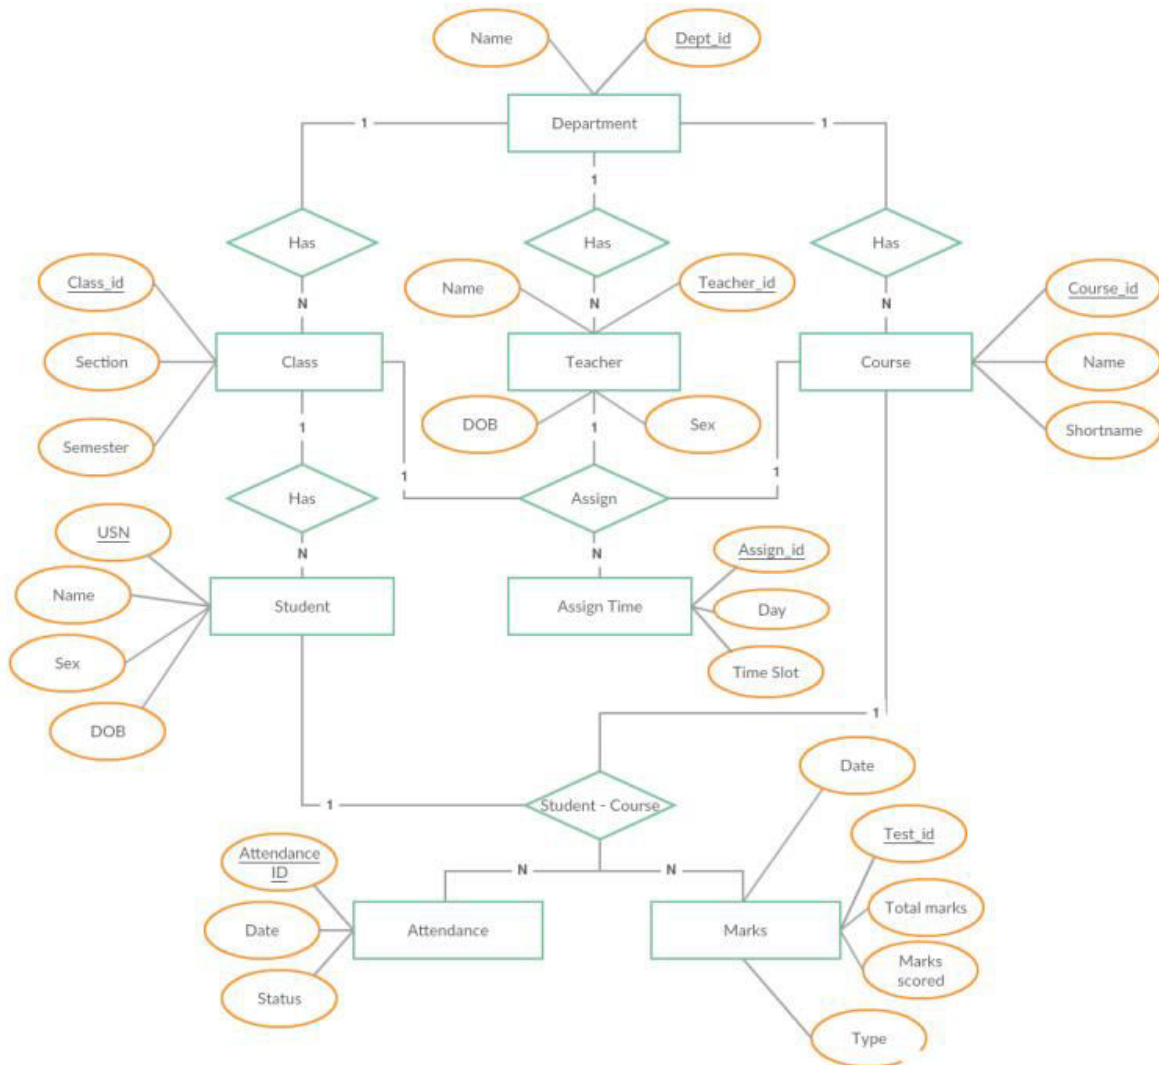

Requirements change management is used when there is a request or proposal for a change in the requirements. The advantage of this process is that the changes to the proposals are managed consistently and in a controlled manner. Note that many activities of requirements management are like software configuration management activities. An efficient requirement change management process undergoes a number of stages for changes to the requirements. These stages are listed below.

1. **Problem analysis and change specification:** The entire process begins with identification of problems to the requirements. The problem or proposal is analyzed to verify whether the change is valid. The outcome of the analysis is provided to the 'change requester' and a more specific requirements change proposal is then made.

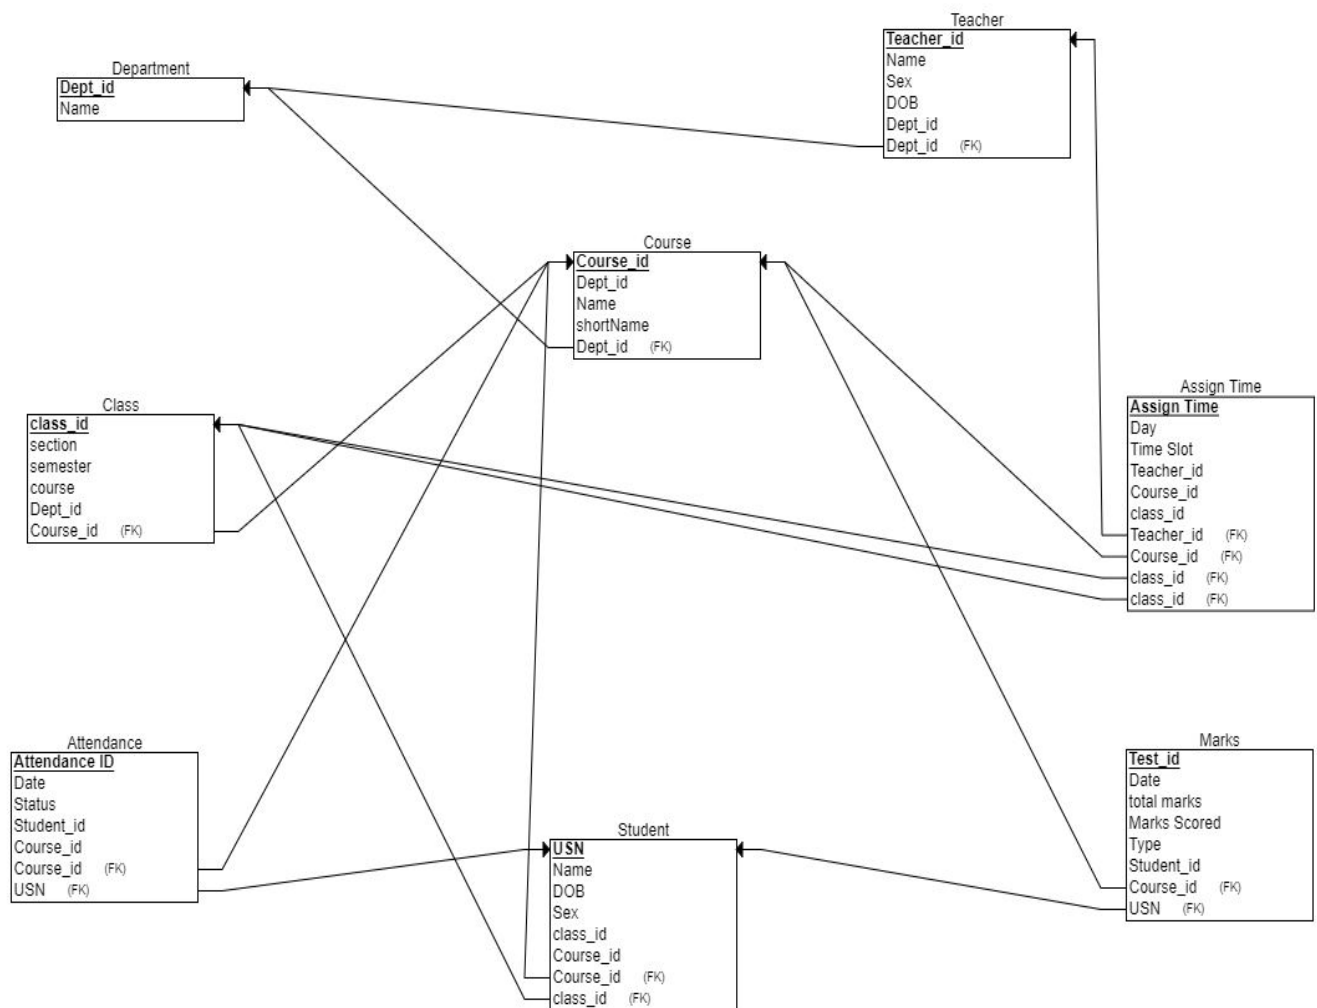

2. **Change analysis and costing:** The effect of a change requested on the requirement is assessed according to traceability information. The cost for this can be estimated on the basis of modification made to the design and implementation. After the analysis is over, a decision is made whether changes are to be made.

3. **Change implementation:** Finally, the changes are made to the requirements document, system design and implementation. The requirements document is organized in such a manner so that changes to it can be made without extensive rewriting. Minimizing the external references and making document sections modular achieves changeability in the document. By doing this, individual sections can be changed and replaced without affecting other parts of the document.

Graphical User Interface

System Implementation

The college ERP system has three main user classes. These include the students, teachers and administrator. This section will explain in detail all the features and the working of those for each user class.

10.1 Student

Login

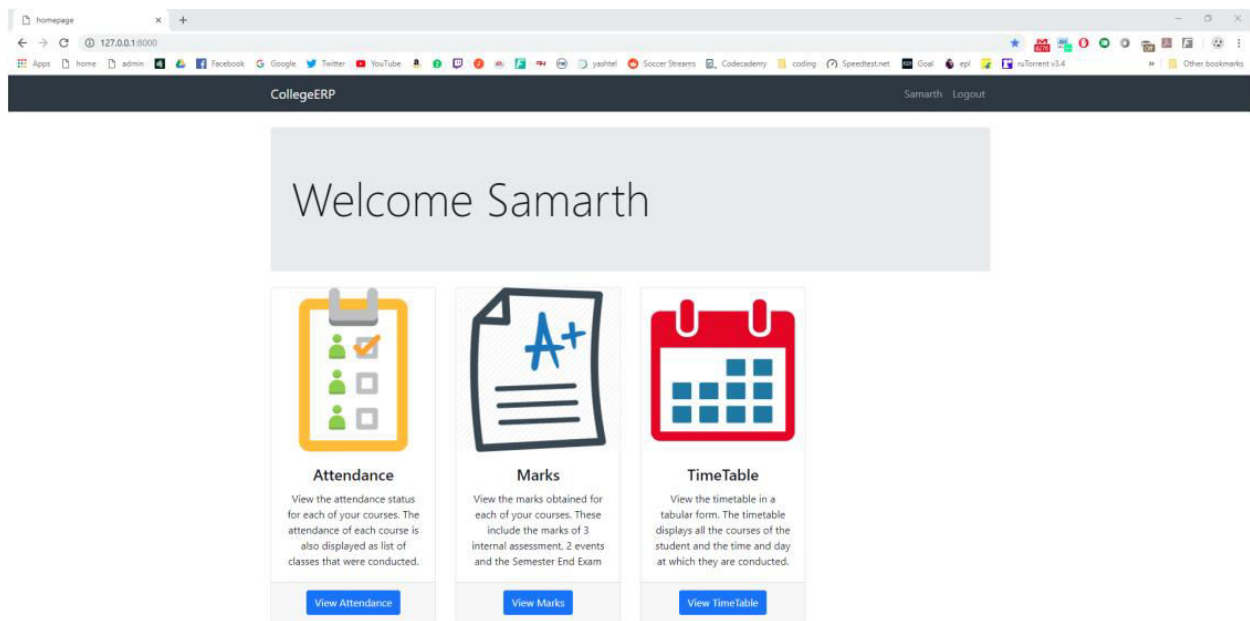

Each student in the college is assigned a unique username and password by the administrator. The username is the same as their USN and so is the password. They may change it later according to their wish.

Student Login Page

Homepage

After successful login, the student is presented a homepage with their main sections, attendance, marks and timetable. In the attendance section the student can view their attendance status which includes the total classes, attended classes and the attendance percentage for each of their courses. In the marks section, the student can view the marks for each of their courses out of 20 for 3 internal assessments, 2 events. Also, the semester end examination for 100 marks. Lastly, the timetable provides the classes assigned to that student and day and time of each in a tabular form.

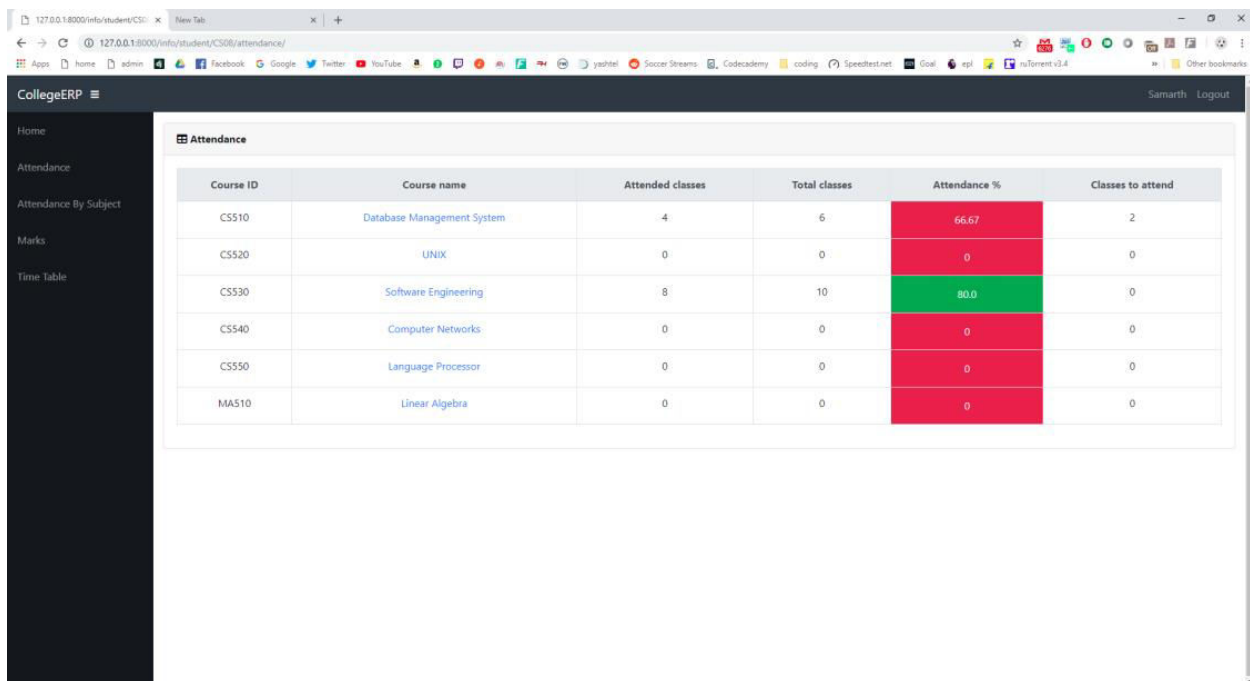

Student Home Page

4.1.3 Attendance

On the attendance page, there is a list of courses that is dependent on each student. For each course, the course id and name are display along with the attended classes, total classes and the attendance percentage for that particular course. If the attendance percentage is below 75 for any course, it is displayed in red denoting shortage of attendance, otherwise it is green. If there is any shortage, it specifies the number of classes to attend to make up for it. If you click on each course, it takes you to the attendance detail page.

Attendance Detail

This page displays more details for the attendance in each course. For each the course, there is a list of classes conducted and each is marked with the date, day and whether the student was present or absent on that particular date.

The screenshot shows a web browser window displaying the 'CollegeERP' application. The page title is 'Attendance'. On the left is a dark sidebar with navigation links: Home, Attendance, Attendance By Subject, Marks, and Time Table. The main content area contains a table with the following data:

Course ID	Course name	Attended classes	Total classes	Attendance %	Classes to attend
CS510	Database Management System	4	6	66.67	2
CS520	UNIX	0	0	0	0
CS530	Software Engineering	8	10	80.0	0
CS540	Computer Networks	0	0	0	0
CS550	Language Processor	0	0	0	0
MAS10	Linear Algebra	0	0	0	0

Student Attendance Detail Page

Marks

The Marks page is a table with an entry for each of their courses. The course id and name are specified along the marks obtained in each of the tests and exams. The tests include 3 internal assessments with marks obtained out of a total of 20, 2 events such as project, assignment, quiz etc., with marks out of 20. Lastly, one semester end exam with marks out of 100.

The screenshot shows a web browser window with the URL `127.0.0.1:8000/info/student/CSDB/marks_list/`. The page is titled "CollegeERP" and has a sidebar menu with options: Home, Attendance, Attendance By Subject, Marks, and Time Table. The "Marks" section is active, displaying a table with the following data:

Course ID	Course name	Internals 1	Internals 2	Internals 3	Event 1	Event 2	SEE
CS510	Database Management System	0	0	0	0	0	0
CS520	UNIX	0	0	0	0	0	0
CS530	Software Engineering	9	15	10	15	15	0
CS540	Computer Networks	0	0	0	0	0	0
CS550	Language Processor	0	0	0	0	0	0
MAS10	Linear Algebra	0	0	0	0	0	0

Timetable

This page is a table which lists the day and timings of each of the classes assigned to the student. The row headers are the days of the week and the column headers are the time slots. So, for each day, it specifies the classes in the time slots. The timetable is generated automatically from the assign table, which is a table containing the information of all the teachers assigned to a class with a course and the timings the classes.

Timetable

	7:30 - 8:30	8:30 - 9:30	9:30 - 10:30	Break	11:00 - 11:50	11:50 - 12:40	12:40 - 1:30	Lunch	2:30 - 3:30	3:30 - 4:30	4:30 - 5:30
Monday			CS540		CS510	CS530	CS550				
Tuesday					MA510	CS510	CS540		CS520	CS550	
Wednesday					MA510	CS520	CS530				
Thursday									CS540	CS530	CS510
Friday			MA510		CS520	CS550	CS530				
Saturday		MA510	CS510		CS540	CS520	CS550				

Student Timetable

10.3 Teacher

Login

Each teacher in the college is assigned a unique username and password by the administrator.

The username is their teacher ID and the same for password. The teacher may change the password later.

The screenshot shows a web browser window with a login form. The form is titled "Login" and has two input fields: "Username" and "Password". The "Username" field contains the text "trisia" and the "Password" field contains a series of dots. A green "Login" button is located below the password field. The browser's address bar shows the URL "127.0.0.1:8000/accounts/login/".

Teacher Login

Homepage

After successful login, the student is presented a homepage with their main sections, attendance, marks, timetable and reports. In the attendance section, the teacher can enter the attendance of their respective students for the days on which classes were conducted. There is a provision to enter extra classes and view/edit the attendance of each individual student. In the marks section, the teacher may enter the marks for 3 internals, 2 events and 1 SEE for each student. They can also edit each of the entered marks.

The timetable provides the classes assigned to the teacher with the day and timings in a tabular form. Lastly, the teacher can generate reports for each of their assigned class.

4.2.3 Attendance

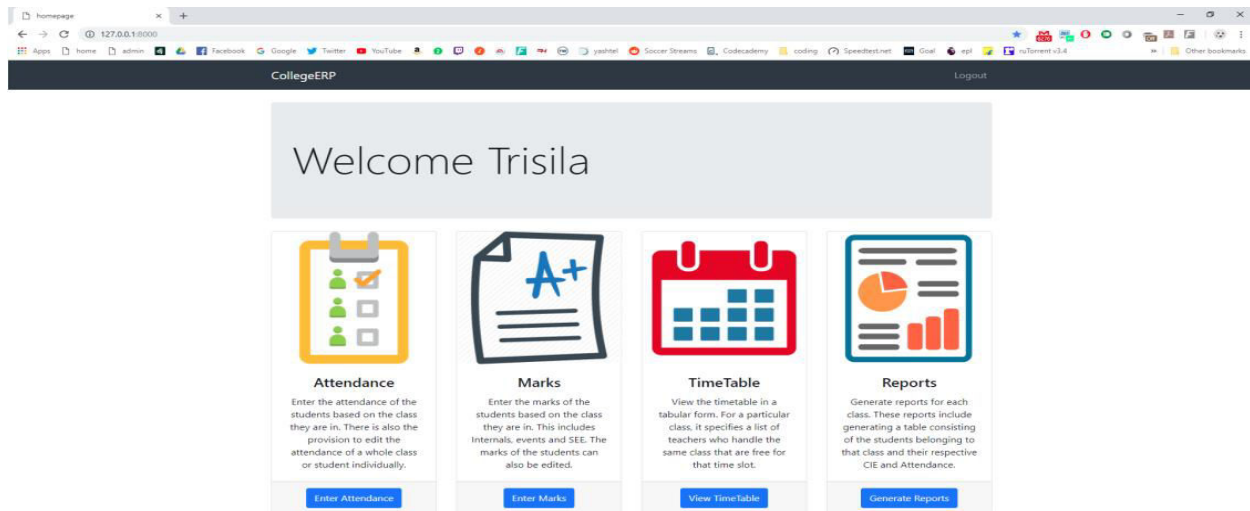

There is a list of all the class assigned to teacher. So, for each class there are 3 actions available.

They are:-

Enter Attendance

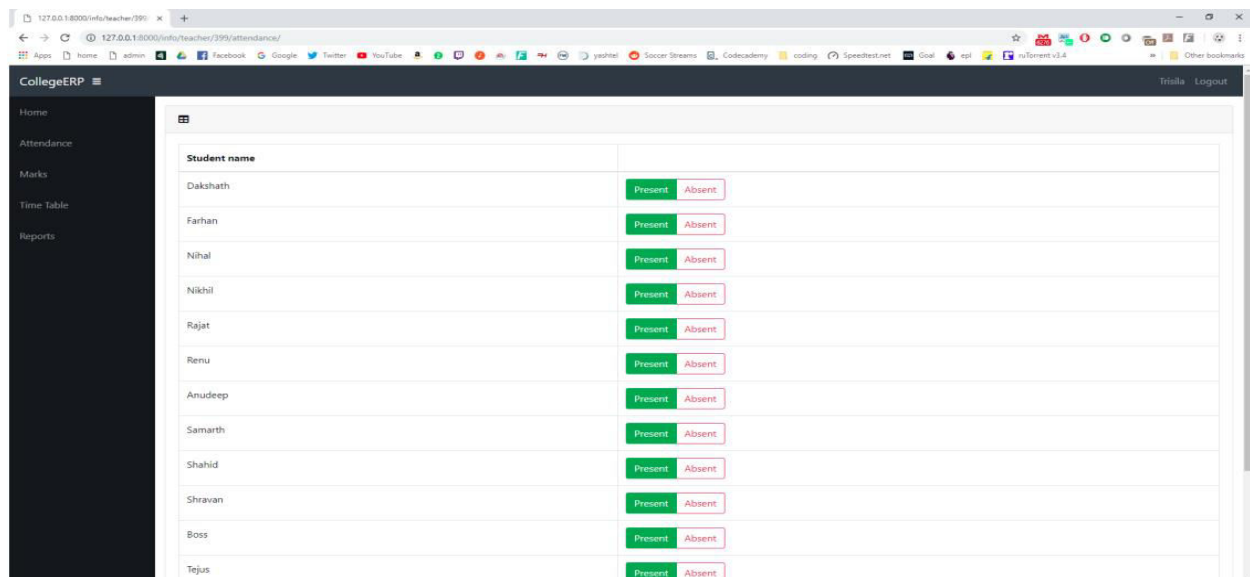

On this page, the classes scheduled or conducted is listed in the form of a list. Initially, all the scheduled classes will be listed from the start of the semester to the current date. Thus, if there is class scheduled for today, it will automatically appear on top of the list. If the attendance of any day is not marked it will be red, otherwise green if marked. Classes can also be cancelled which will make that date as yellow.

While entering the attendance, the list of students in that class is listed and there are two options next

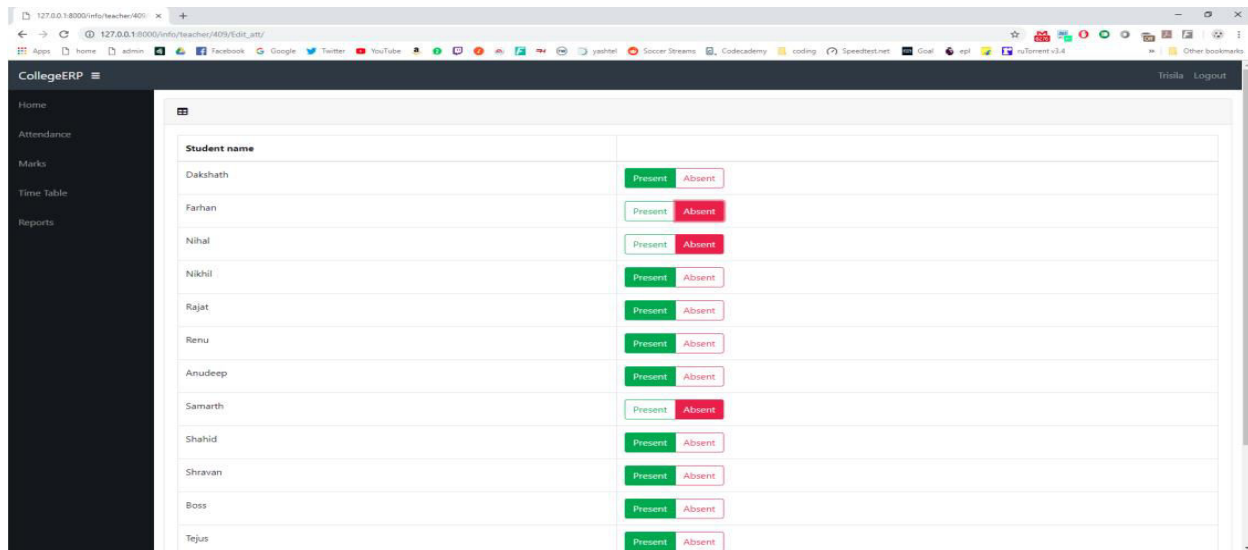

Teacher homepage

to each. These options are in the form of a radio button for present and absent. All the buttons are initially marked as present and the teacher just needs change for the absent students.

Edit Attendance

After entering attendance, the teacher can also edit it. It is similar to screen for entering attendance, only the entered attendance is saved and display. The teacher can change the appropriate attendance and save it.

Editing attendance

Extra Class

If a teacher has taken a class other than at the scheduled timings, they may enter the attendance for that as well. While entering the extra class, the teacher just needs to specify the date it was conducted and enter the attendance of each of the students. After submitting extra class, it will appear in the list of conducted classes and thus, it can be edited.

Student Attendance

For each assigned class, the teacher can view the attendance status of the list of students. The number of attended classes, total number of classes conducted and the attendance percentage is displayed. If the attendance percentage of any of the students is below 75, it will be displayed in red. Thus, the teacher may easily find the list of students not eligible to take a test.

Student Attendance Details

The teacher can view the attendance detail of all their assigned students individually. That is, for all the conducted classes, it will display whether that student was present or absent. The teacher can also edit the attendance of each student individually by changing the attendance status for each conducted class.

USN	Student name	Attended classes	Total classes	Attendance %	Classes to attend
CS01	Dakshath	8	10	80.0	0
CS02	Farhan	10	10	100.0	0
CS03	Nihal	7	10	70.0	2
CS04	Nikhil	8	10	80.0	0
CS05	Rajat	10	10	100.0	0
CS06	Renu	10	10	100.0	0
CS07	Anudeep	8	10	80.0	0
CS08	Samarth	8	10	80.0	0
CS09	Shahid	10	10	100.0	0
CS10	Shravan	7	10	70.0	2
CS11	Boss	10	10	100.0	0
CS12	Tejus	9	10	90.0	0
CS13	Vijeth	8	10	80.0	0

Attendance of students in a class

#	Date	Day	Status	
1	Oct. 26, 2018	Friday	Absent	Change
2	Oct. 29, 2018	Monday	Present	Change
3	Oct. 31, 2018	Wednesday	Present	Change
4	Nov. 1, 2018	Thursday	Present	Change
5	Nov. 2, 2018	Friday	Present	Change
6	Nov. 7, 2018	Wednesday	Present	Change

8	Nov. 9, 2018	Friday	Present	Change
9	Nov. 12, 2018	Monday	Present	Change
10	Nov. 15, 2018	Thursday	Present	Change

Attendance details of an individual student

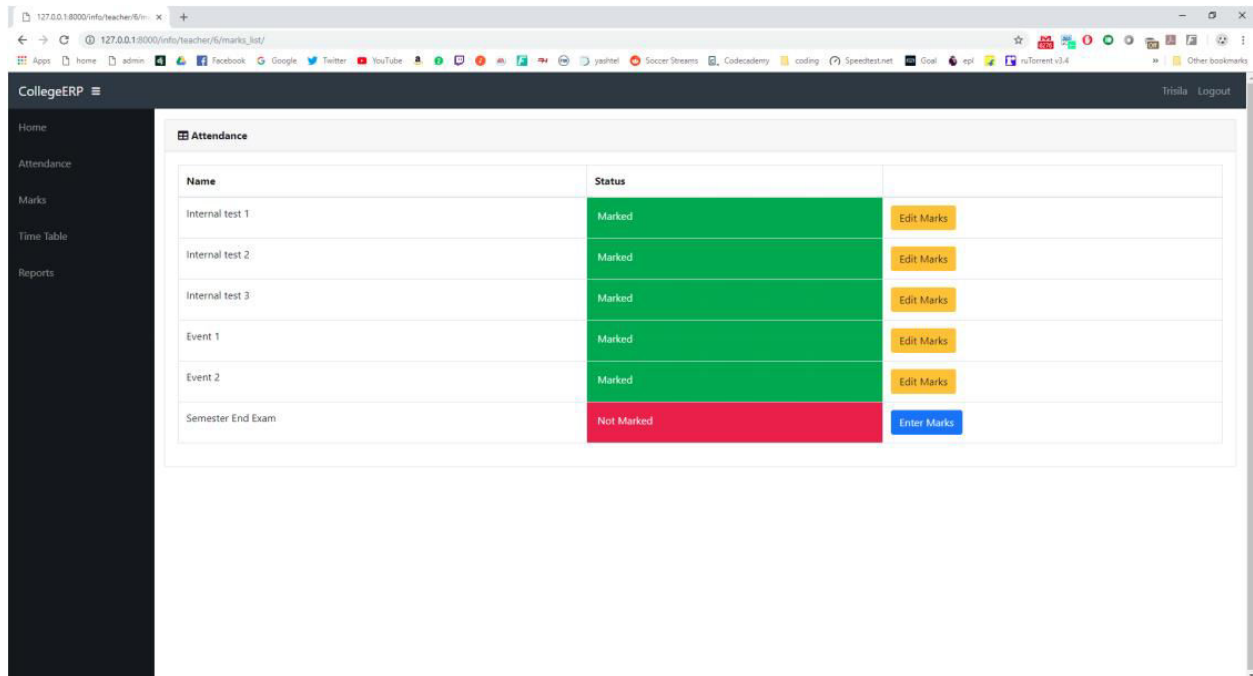

4.2.4 Marks

On this page, the list of classes assigned to the teacher are displayed along with two actions for each class.

These actions are :

Enter Marks

On this page, the teacher can enter the marks for 3 internal assessments, 2 events and one semester end exam. Initially all of them are marked red to denote that the marks have not been entered yet. Once the marks for a test is entered, it turns green. While entering the marks for a particular test, the list of students in that class is listed and marks can be entered for all of them and submitted. Once, the marks are submitted, the students can view their respective marks. Incase if there is a need to change the marks of any student, it is possible to edit the marks.

Entering marks

Edit Marks

Marks for a test can be edited. While editing, the list of students in that class is displayed along with already entered marks. The marks to be updated can be changed and submitted. The students can view this change immediately.

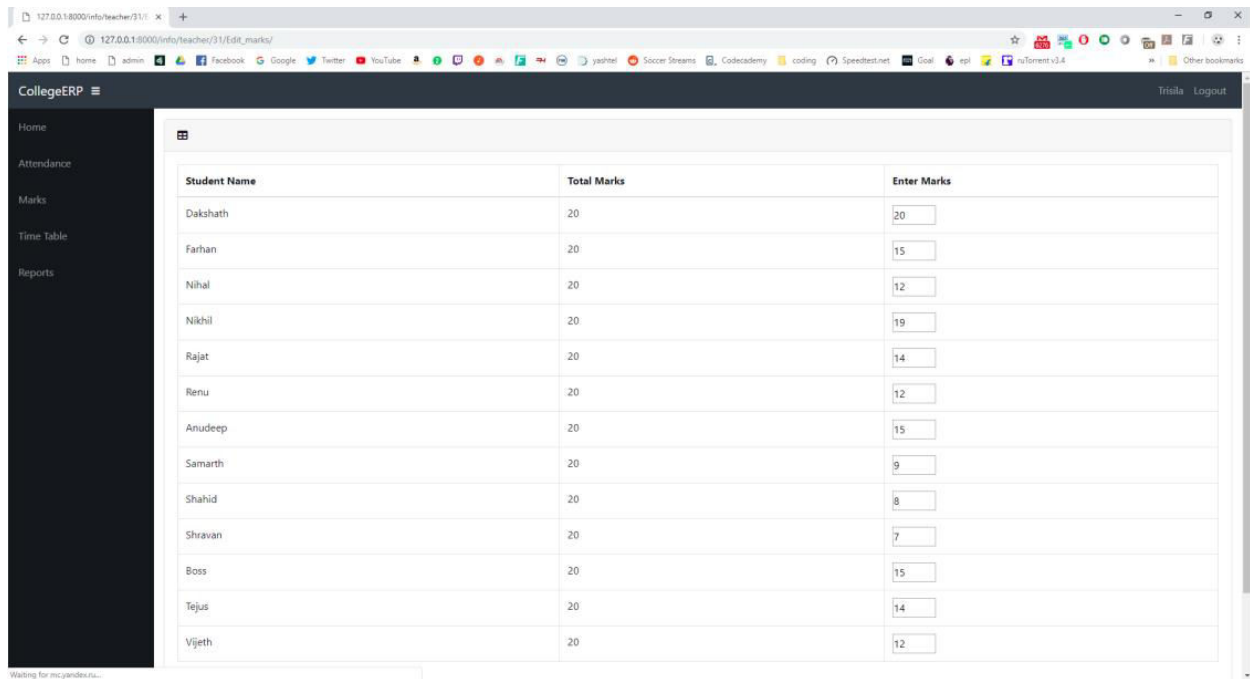

Student Marks

For each assigned class, the teacher has access to the list of students and the marks they obtained in all the tests. This is displayed in a tabular form.

4.2.5 Timetable

This page is a table which lists the day and timings of each of the classes assigned to the teacher. The row headers are the days of the week and the column headers are the time slots. So, for each day, it specifies the classes in the time slots. The timetable is generated automatically from the

assign table, which is a table containing the information of all the teachers assigned to a class with a course and the timings the classes.

Student Name	Total Marks	Enter Marks
Dakshath	20	20
Farhan	20	15
Nihal	20	12
Nikhil	20	19
Rajat	20	14
Renu	20	12
Anudeep	20	15
Samarth	20	9
Shahid	20	8
Shravan	20	7
Boss	20	15
Tejus	20	14
Vijeth	20	12

Editing marks

Teacher Timetable

The screenshot shows a web application interface. On the left, a modal titled 'List Of Free Teachers' is open, displaying a list of teachers: Shalini, Chandrashekar, Srinath, and Guru. The main area displays a 'Timetable' grid. The grid has columns for time slots: 7:30 - 8:30, 8:30 - 9:30, 9:30 - 10:30, Break, 11:00 - 11:50, 11:50 - 12:40, 12:40 - 1:30, Lunch, 2:30 - 3:30, 3:30 - 4:30, and 4:30 - 5:30. The rows represent days of the week: Thursday, Friday, and Saturday. The grid shows the following assignments:

	7:30 - 8:30	8:30 - 9:30	9:30 - 10:30	Break	11:00 - 11:50	11:50 - 12:40	12:40 - 1:30	Lunch	2:30 - 3:30	3:30 - 4:30	4:30 - 5:30

List of free teachers for a time slot

4.2.6 Reports

The last page for the teachers is used to generate reports for each class. The report specifies the list of students in that class and their respective CIE and attendance percentage. CIE is the average of the marks obtained from the tests, 3 internals and 2 events. The CIE is out of 50 and the students with CIE below 25 are marked in red and are not eligible to write the semester end exam. Also, the attendance percentage is displayed with students below 75% marked in red.

The screenshot shows a web application interface for 'CollegeERP'. On the left is a dark sidebar with navigation links: Home, Attendance, Marks, Time Table, and Reports. The main content area is titled 'Marks' and displays a table with the following data:

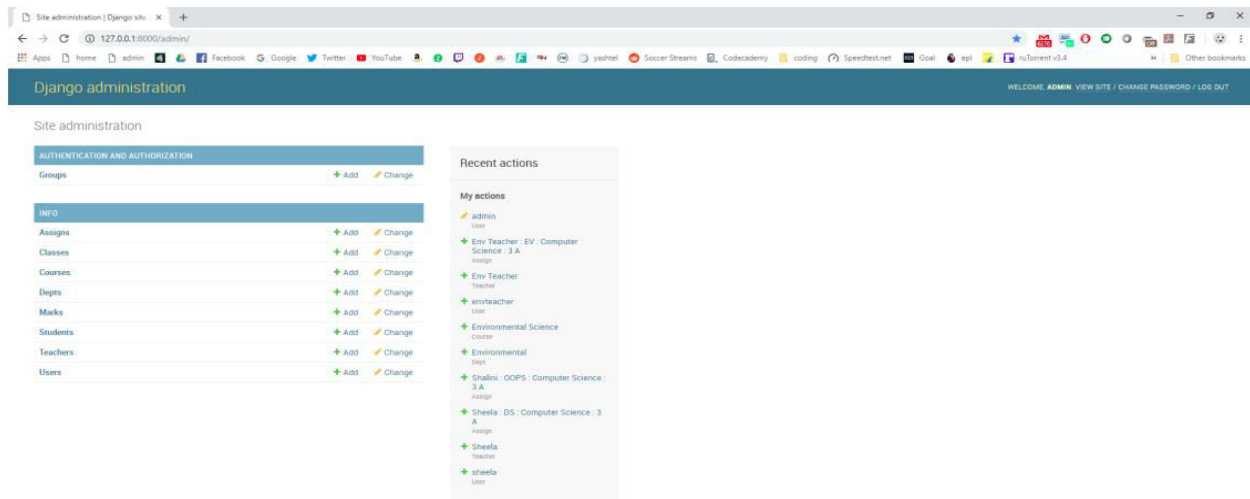

Student USN	Student Name	Attendance	CIE
CS01	Dakshath	80.0	35
CS02	Farhan	100.0	35
CS03	Nihal	70.0	40
CS04	Nikhil	80.0	38
CS05	Rajat	100.0	40
CS06	Renu	100.0	31
CS07	Anudeep	80.0	37
CS08	Samarth	80.0	32
CS09	Shahid	100.0	37
CS10	Shravan	70.0	24
CS11	Boss	100.0	41
CS12	Tejus	90.0	35
CS13	Vijeth	80.0	41

CIE and attendance for a class of students

4.3 Administrator

The administrator is responsible for adding and maintaining all the departments, students, teachers, classes and courses. All this data is stored in the database in their respective tables. The admin is also responsible for adding and maintaining the list of teachers assigned to class with a course and the timings. This information is stored in the Assign table. The admin also has access to the marks and attendance of each student and can modify them.

There are several features in place to ensure that querying the database is quick and efficient for the administrator. As the database has the potential to become huge, there is a search feature for every table including student, teacher etc. The search has got a specific record based on name or id. Also, it can filter the record based on department, class etc.

Admin Homepage

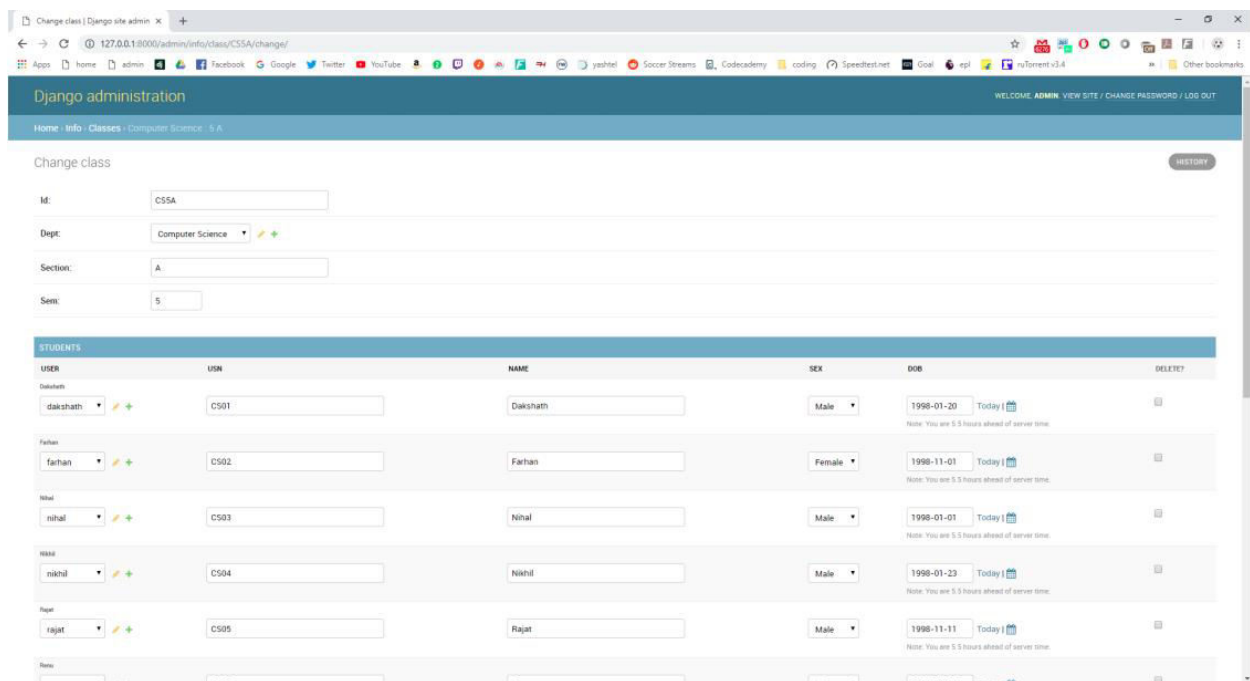

Fig. shows the details of the class table. Each class consists of a list of students as shown.

Conclusion

14.1 Conclusion

By using Existing System accessing information from files is a difficult task and there is no quick and easy way to keep the records of students and staff. Lack of automation is also there in the Existing System.

The aim of Our System is to reduce the workload and to save significant staff time.

Title of the project as College ERP System is the system that deals with the issues related to a particular institution. It is the very useful to the student as well as the faculties to easy access to finding the details. The college ERP provides appropriate information to users based on their profiles and role in the system. This project is designed keeping in view the day to day problems faced by a college system.

The fundamental problem in maintaining and managing the work by the administrator is hence overcome.

Prior to this it was a bit difficult for maintaining the time table and also keeping track of the daily schedule. But by developing this web-based application the administrator can enjoy the task, doing it ease and also by saving the valuable time. The amount of time consumption is reduced and also the manual calculations are omitted, the reports can be obtained regularly and also whenever on demand by the user. The effective utilization of the work, by proper sharing it and by providing the accurate results. The storage facility will ease the job of the operator. Thus, the system developed will be helpful to the administrator by easing his/her task.

This System provide the automate admissions no manual processing is required. This is a paperless work. It can be monitored and controlled remotely. It reduces the man power required. It provides

accurate information always. All years together gathered information can be saved and can be accessed at any time. The data which is stored in the repository helps in taking intelligent decisions by the management providing the accurate results. The storage facility will ease the job of the operator. Thus the system developed will be helpful to the administrator by easing his/her task providing the accurate results. The storage facility will ease the job of the operator.

This project is successfully implemented with all the features and modules of the college management system as per requirements.
